Ethernet switch, 24 Ethernet ports on the front in RJ45 format, automatic detection of 10, 100 or 1000 Mbps data transmission rate, coupling of network segments with different transmission speeds, auto crossing function, installs in 19-in. (482 mm) rack

Product Description

Ethernet interface

The FL SWITCH 1924 has 24 Ethernet ports in RJ45 format. It is mounted in a 19-in. (482 mm) rack with AC power. The data transmission speed is 10 Mbps, 100 Mbps or 1000 Mbps. The switch also supports jumbo frames.

Each port has an auto crossing function. It is not necessary to make a distinction between 1:1 or crossover Ethernet cables. Mounting brackets and power cords for EEC (CEE 7/4) and North America (NEMA 5-15) are included. User supplies screws for bracket to rack connection.

Switching properties of FL SWITCH 1924

-Store-and-forward:

All data telegrams that are received by the switch have their validity checked. Invalid or faulty data packets (>9216 bytes or CRC errors) and fragments (<64 bytes) are rejected. Valid data telegrams are forwarded by the switch. The switch always forwards the data using the data transmission speed that is used in the destination network segment.

-Multi-address function:

The switch independently learns the addresses for termination devices, which are connected via a port, by evaluating the source addresses in the data telegrams. Only packets with unknown addresses, with a source address of this port or with a multicast/broadcast address in the destination address field are forwarded via the corresponding port. The switch can store up to 8192 MAC addresses in its address table. –Quality of service (QoS): IEEE 802.1P/Q

The FL SWITCH 1924 switches are capable of reading Ethernet packets that have already been assigned a priority level by a managed switch. In case of heavy traffic, packets with a priority level between 4 and 7 are considered high priority and processed before packets with a priority level between 0 and 3 (2:1 ratio). After prioritization the packets are forwarded without modification. –Grounding

The metal RJ45 socket housings are connected to earth/ground. For maximum noise immunity, shielded RJ45 connectors and cables should be used.

Why buy this product

- ☑ Jumbo frame support (frame size up to 9216 bytes/frame)
- Quality of service (QoS) support (2 queus)
- Power supply range of 100 ... 240 V AC at 50/60 Hz
- MAC address table size is 8192 (8k) entries

Two power cords are included. For North America, a NEMA 5-15 3-pin plug (type A). For EEC, a CEE 7/4 (type F)

Air pressure (operation)	86 kPa 108 kPa (1500 m above sea level)

Interfaces

Interface 1	Ethernet
No. of ports	24 (RJ45 ports)
Connection method	RJ45
Transmission physics	Twisted pair connection
Transmission speed	10/100/1000 Mbps (full or half duplex)
Transmission length	100 m (per segment)
Signal LEDs	Activity, link status

Function

I Basic functions	Unmanaged switch / auto negotiation, complies with IEEE 802.3, store and forward switching mode
MAC address table	8192
Status and diagnostic indicators	LEDs: U _s , link and activity per port

Network expansion parameters

Cascading depth	Network, linear, and star structure: any
Maximum conductor length (twisted pair)	100 m

Supply voltage

Supply voltage	120 V AC
	220 V AC
Supply voltage range	100 V AC 240 V AC (50/60 Hz)
Typical current consumption	312 mA (100 V AC)

Technical data

Supply voltage

Max. current consumption	0.4 A (maximum)
Inrush surge current	23 A (200 μs @ 230 V AC)

General

Mounting type	Rack mount, includes brackets
Туре АХ	Stand-alone
Net weight	2730 g

Drawings

Attach the brackets to each side of the switch with the included screws (as shown).

Install the switch in the rack using the rack hardware.

Two power cords are included and provide line, neutral and ground conductors:

For North American markets the power cord uses a NEMA 5-15 plug. For European markets the power cord uses a CEE 7/4 plug. Both power cords use a common plug (IEC 60320-1 type C13) for connecting to the FL SWITCH 1924.

Schematic diagram

RJ45 pinout for 1000 Mbps

The US LED indicates power is present.

Each port has 2 LEDs:

- When the 100 LED is illuminated, the port is operating at 100 Mbps. When off, it is operating at 10 Mbps.
- The LNK/ACT LED is illuminated when the port is connected and off when not connected. Flashing indicates data transfer (RX or TX).
